### **DETAILED ACTION**

1. Claims 1-10 are allowed.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Please amend the claims as follows:

Claim 1:

On line 5 please replace "having and" with "having an"

Claim 10:

On line 14 please replace "having and" with "having an"

### **REASONS FOR ALLOWANCE**

3. The following is an examiner's statement of reasons for allowance:
4. Jacobson et al., U.S. Pat. No. 7065665 teaches a handshaking protocol for transmitting data between pipelines as is done in GALS systems [col. 4 lines 18-25 and col. 6 line 55 – col. 7 line 14].
5. Yasukawa et al., U.S. Pat. No. 6425088 teaches clocking a data transfer between asynchronous circuits using a handshaking method [col. 1 lines 25-55].

6. Muttersbach et al., Practical Design of Globally-Asynchronous Locally-Synchronous Systems<sup>1</sup> teaches a globally-asynchronous locally-synchronous (GALS) system comprising a delay circuit ensuring a clock period that is long enough to transfer information between storage elements of the asynchronous systems and further comprising a handshake circuit for controlling the timing of the transfer [pages 3-6].

7. Zhuang et al., An Asynchronous Wrapper with Novel Handshake Circuits for GALS Systems teaches a GALS system comprising a delay circuit ensuring a clock period that is long enough to transfer information between storage elements of the asynchronous systems and further comprising a handshake circuit for controlling the timing of the transfer [page 1524].

8. Villiger et al., Self-timed Ring for Globally-Asynchronous Locally-Synchronous Systems teaches a GALS system comprising a delay circuit ensuring a clock period that is long enough to transfer information between storage elements of the asynchronous systems and further comprising a handshake circuit for controlling the timing of the transfer [pages 1 and 3].

9. The prior art of record does not explicitly teach or suggest individually or in combination at least part of the handshake signals during a handshake transaction are timed by traveling through the delay circuit and are applied to the clock input to clock the locally synchronous circuit module.

10. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
